Use the Command Push Button class to create a labeled button that represents an action. Pushing the button initiates the command.

**Overview**

```plaintext
Parent:
sashelp.fsp.composit.class

Class:
sashelp.afclass.GButton.class
```

**Methods**

The Command Push Button class is a subclass of the Composite class, which inherits all of the methods from the Widget class.

**Dictionary**

```plaintext
_getLength

Returns the length of the command push button

Syntax
CALL NOTIFY (field-name, '_getLength', length);
```
### _setLength

Sets the length of the command push button

#### Syntax

```plaintext
CALL NOTIFY (field-name, '_setLength', length);
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>length</td>
<td>N</td>
<td>returns the length of the command push button, in characters</td>
</tr>
</tbody>
</table>

#### Details

If the length specified is too long for the window, this method returns without doing anything.
